

FOP Development: Release Mechanics

Version 681309

Table of contents

- 1 Introduction..... 2
- 2 Checklist..... 2
- 3 Resources..... 3
- 4 Announcing the release..... 3

1 Introduction

This page documents the process of creating a FOP release. FOP releases are coordinated by one member of the team (currently Christian Geisert), so others do not ordinarily need to use this information. The purpose of documenting it here is to facilitate consistency, ensure that the process is captured, and to allow others to comment on the process.

The checklist below was assembled from Christian Geisert's notes. It will be expanded in the future as he has time.

2 Checklist

- Determine whether this is a Release Candidate or a Release.
- Determine whether further testing is required.
- Commit any outstanding changes
- Create a branch called `branches/fop-v_vv`
- Edit release notes (`README` and `status.xml` in the root).
- Update the `index.xml`, `site.xml` and `download.xml` for the new version.
- Update the version numbers in the release column on the compliance page (`compliance.xml`); update the compliance in the release column to the current state (development column).
- Update version number in `build.xml` (not to be merged back into trunk).
- Copy trunk documentation directory to a new directory with the version number, and update any links and the `.htaccess` file for redirections.
- Copy `test/fotree/disabled-testcases.xml` and `test/layoutengine/disabled-testcases.xml` to the new version directory `<version>/fotree/disabled-testcases.xml` and `<version>/layoutengine/disabled-testcases.xml`. Copy `known-issues.xml` to the new version directory. Copy `knownissues-overview.xml` from the previous to the new version directory.
- Delete the previous version directory.
- Build the dist files (`build[.sh] dist`) and upload them to your web directory on `people.apache.org`
- Ask on `fop-dev` to check the branch and the generated dist files for errors.
- Tag the source tree with the release ID. For example, if the release is 0.94: `svn copy https://svn.apache.org/repos/asf/xmlgraphics/fop/branches/fop-0_94 https://svn.apache.org/repos/asf/xmlgraphics/fop/tags/fop-0_94`
- Make a fresh checkout with the just created tag: `svn co https://svn.apache.org/repos/asf/xmlgraphics/fop/tags/fop-0_94`
- Copy `jimi` and `jai` to `lib/` (`jimi-1.0.jar`, `jai_core.jar`, `jai_codec.jar`)
- Copy `jce-jdk13-119.jar` from http://www.bouncycastle.org/latest_releases.html to `lib/`
- Copy the hyphenation patterns jar file `fop-hyph.jar` to `lib/` (e.g. from `http://sourceforge.net/projects/offo`
- Alternatively, create a `build-local.properties` file that points to the above libs.
- Run `build[.sh] dist`. Do this using Sun JDK 1.4.2_08 or later. A Forrest installation is needed.
- Create signatures. Don't forget to upload your KEY: `gpg -a -b --force-v3-sigs fop-0.94-src.tar.gz` etc.

- Upload the dist and signature files to your web directory on people.apache.org (An account on minotaur is needed): `scp fop-0.94*.tar.gz* chrisg@people.apache.org:public_html/`
- Check permissions: `chmod 664 ... ; chgrp xmlgraphics ...`
- Add MD5 sums: `md5 fop-0.94-src.tar.gz > fop-0.94-src.tar.gz.md5` etc.
- Make a test download.
- Start a vote for the release on `general@xmlgraphics.a.o`. The message should point to the release files and list the MD5 sums (`cat *.md5`). The vote is open for 72hrs.
- When the release is accepted, copy the release files, their md5 sum files and the signature files to `/www/www.apache.org/dist/xmlgraphics/fop/` in the subdirectories `source` and `binaries`. Create links to all files in the `fop` directory. Remove the links to the files of the previous version.
- Update `HEADER.html` and `README.html` in `people.apache.org:/www/www.apache.org/dist/xmlgraphics/fop/`
- Wait 24 hours (for the mirrors to catch up).
- Merge the changes of the subversion release branch back into trunk (not the version number in the build file) and delete the branch.
- Deploy the updated documentation to the FOP website.
- Post announcements on `fop-dev` and `fop-user` and other related mailing lists.
- Ask a Bugzilla admin (Christian Geisert) to add a bugzilla entry for the new release id, or create an issue at `https://issues.apache.org/jira/browse/INFRA`.

3 Resources

The following is a sample of some other project release checklists, which might be consulted for ideas:

- [Apache Batik](#)
- [Apache Ant](#)
- [Apache Cactus](#)

Following are links with information about mirroring:

- [Apache Mirroring](#)
- Stefan Bodewig's [Making your Downloads Mirrorable](#)

4 Announcing the release

Here's a collected list of places where to announce new FOP releases:

- `fop-dev@xmlgraphics.apache.org`
- `fop-users@xmlgraphics.apache.org`
- `general@xmlgraphics.apache.org`
- `general@xml.apache.org`
- `announce@apache.org` (from your apache.org address)
- `xsl-list@lists.mulberrytech.com` (subscriber-only)
- `XSL-FO@yahoogroups.com` (subscriber-only)
- `www-xsl-fo@w3.org`
- `docbook-apps@lists.oasis-open.org` (subscriber-only)
- `dita-users@yahoogroups.com` (subscriber-only) (<http://dita-ot.sourceforge.net/>)

- <http://xslfo-zone.com/news/index.jsp>
- <http://www.w3.org/Style/XSL/>
- <http://freshmeat.net/projects/fop/>
- any others?
